

Cedric- Equipment for Pharmacy

1. Autoclave- The autoclave is a machine used in Pharmacy to keep the workplace and tools clean and running efficiently. This machine is used to sterilize equipment and tools. The autoclave stops the cross-contamination between drugs and the spread of germs.

2. Liquid-Filling Machine- This machine is used to fill up liquid prescriptions. This machine fills up the bottle to the right measurements.

3. Tablet-Counting Machine- This machine is used to help Pharmacy technicians fill medical prescriptions. The prescriptions are mostly pills.

4. Tablet Hardness Tester- This machines test the hardness and friability, or fragility of a tablet. This machine is important because it helps the Pharmacist gauge the ability of a tablet to avoid breaking during transportation.
