

Cedric- Pharmacy Profile

A socially active person is the best kind of person for a Pharmacy career. Pharmacists help patients get the right medication so they can be healthy. Pharmacists have to know what the patient needs by talking to the patient or the patient's doctor. The medicine the pharmacist decides to give you should be one that doesn't affect you and prevents you from getting sick or helps you heal. You can start getting into the job by becoming a pharmacy technician or even job shadowing a pharmacist. When you get out of school you can search for a job at Kroger's or a hospital.
