

Becoming a Histopathologist

To be a histopathologist, you have to be comfortable working in a lab most of the time. You should have a strong stomach, as you will be working with a lot of bodily tissues. To work in this field in the Air Force, you have to go to a technical school for 180 days. This technical training will give you credit towards Histologic technology. You need to have a knowledge of natural sciences and other medical knowledge. You will learn to prepare tissue for examination, diagnose diseased samples, maintain lab equipment, and help with autopsies. Although there aren't any specific classes you'll need to study if you were to go to college for this, it will help to study anatomy and other related courses.
