

Kyle -Sprinkler Fitter Task and Responsibilities

A sprinkler fitter's job is to to put in sprinkler systems in every building that is being made today. They have different responsibilities depending on their level of experience. A foreman of a job is supposed to oversee what is going on as well as work on the project at hand. He makes sure all of the men under him are working at a timely and efficient mater. The entire group of men working on a job are all in charge of looking at the pipes they are

putting in and making sure there are no leaks or loose pipes. The pipes that a fitter puts in are under an insane amount of pressure because they have hundreds of pounds of pressure built up. If a pipe is faulty or damaged in any way it can mean very bad consequences. The pipe can bust and pour thousands of gallons of water in minutes.
